The world's most innovative 5G solutions

Seamless content production for live TV broadcasting with urban mobility

As a leading international broadcaster, TV2 Denmark A/S seeks to provide exciting, dynamic, and high-fidelity content wherever that may be.

Ericsson's world-first macro network implementation, an Enterprise e2e Service Level Agreement solution (Enterprise e2e SLA solution), uses network slicing to deliver reliable, on-demand 5G video contribution stream for live TV broadcast. The solution has enabled TDC NET and TV2 to deploy a 5G live video transmission virtual private network from remote camera in-field to production center, specifically catering to their various needs, such as uninterrupted real-time camera and network performance monitoring of critical communications during live crowded events.

ERICSSON

© 2014-2025 Ericsson. Seamless content production for live TV broadcasting with urban mobility

CONTENT/MEDIA PRODUCTION (AND CONTRIBUTION)

innovative way and imagination of content production by providing the seamless video signal transmission with urban mobility

Information on data transmission production centre personnel to act on live broadcast.

STAKEHOLDERS

TV2 Denmark A/S, TDC NET, Fortinet

RECOMMENDATIONS

This solution will lower entry point and... for professional riders and give them more predictable... the effect of this... den the broadcast... make it easier... based production... it also enables...

Next step and future plans

We want to establish a national innovation center, that enables Denmark to get a leading role within 5G technology.

You can show your support by signing the Lol for "Dansk 5G Innovation Hub".

FORCE Technology takes a leading role in coordination and facilitation of the 5G Innovation Hub.

We look forward to continue our work in supporting the 5G technology development in Denmark and contribute to realization of the positive contributions it can provide society and the Danish industry.

Learnings and take-ways

- 5G SA NPN are ready to be used for ULL live production and devices and components are commercially available
- Spectrum is king – ask your regulator to assign spectrum for 5G SA NPN
- 5G SA PN will be a great tool, but QoS (or slicing) are needed services, to get Low Latency and control
- 5G commercial network are designed to provide DOWNLOAD, typical in ration 8:2. For content production, it's all about UPLOAD and ration 2:8 needed.

Q&A
